

## **Lead Engineer (Chonburi, Thailand - full-time)**

Aeroworks is looking for an enthusiastic and talented Lead Engineer to strengthen our composite division in Chonburi Thailand. You will lead a team of engineers within our Production Engineering department which is responsible for translating customer and internal requirements into engineering documents to facilitate the manufacturing of composites products for the aircraft interior industry. As Lead Engineer you will be responsible for the technical related aspects of one or more of our composite program(s) at our main composite production sites in Thailand and work closely with the local operation managers and quality personnel and the head and support office(s) in the Netherlands.

You will work in an international team and closely with an international group of customers and suppliers with a broad range of responsibilities.

### **Responsibilities:**

- Manages technical projects (such as qualification and pilot production programs and internal work transfers);
- Provide customer support;
- Oversees or performs engineering and design related tasks;
- Prepares or reviews quality plans, drawings, test plans and specifications;
- Prepares or oversees production preparation;
- Designs (or reviews) new tooling.

### **Qualification and skills:**

- Completed Bachelors in Aerospace or mechanical engineering (or comparable degree);
- Several years of experience with managing technical projects or are ready for the next step;
- Practical, problem solving attitude and good analytical capacity;
- Team player;
- Experience with CAD software, preferably SolidWorks.
- Good communication skill, including a fluent level of English.
- To function well within multi-cultural team.

### **We offer:**

- Suitable salary and secondary benefits;
- Possibility to attend courses;
- A dynamic work environment;
- Employment in fast growing international business.
